Education

Stanford University, Stanford, CA

Master of Science in Computer Science (Specialization in Artificial Intelligence)

Sept. 2019 – Mar. 2020

GPA: 4.09 / 4.00

Stanford University, Stanford, CA

Bachelor of Science in Mathematics

Sept. 2015 – Jun. 2019

GPA: 4.03 / 4.00

Honors: Phi Beta Kappa, Graduated with Distinction

Work Experience

Viaduct, Menlo Park, CA

Machine Learning Engineer (full-time)

Mar. 2020 – Present.

- Formulated and implemented data analytics products for automotive OEMs as machine learning engineer at venture-backed startup.
- Led end-to-end development of root cause analysis dashboard. Implemented core data mining algorithm in PySpark, led product sprint to create customer facing dashboards, and pitched solution to clients.
- Started company component library and set up storybook for visual inspection and jest for unit testing. Established and documented approach for creating custom charts using React and d3.
- Built web application to dynamically query and plot vehicle movement using React, Amazon Athena, and kepler.gl.
- Leveraged Tensorflow and NLP architectures to develop embeddings for high dimensional, discrete sensor data, improving model performance across clients by 20%.
- Supervised intern project to create a machine learning model registry using MLFlow. Provided guidance every step of the way, from planning and implementation to integration and documentation.

deeplearning.ai, Palo Alto, CA

Head Teaching Assistant (full-time for first 3 months, then 20 hours / week)

Jun. 2019 – Apr. 2020

- Head teaching assistant for [AI for Medicine Specialization](#) on Coursera.
- Developed assignments and lessons which have reached more than 30,000 students.
- Covered topics such as CNNs, U-Net, survival analysis, Cox proportional hazards, random forests, among others.

Stanford Machine Learning Group, Palo Alto, CA

Research Assistant (20 hours / week)

Sept. 2018 – Sept. 2019

- Developed and validated models for tumor classification using convolutional neural networks.
 - In addition to research, participated in weekly reading groups covering healthcare, statistics, and AI.
-

Side Projects and Publications

leading-pharmacy-chain-vax-map.net

March. 2021

- A playful redesign of the CVS coronavirus vaccine website website. Built using next.js (serverless functions and deployment), mapbox (maps), tailwind (css utilities), and github-actions (scheduled web scraping). Code available at github.com/bora-uyumazturk/vaccine-availability-ui

A Deep Learning Assistant for Cancer Subtype Classification (published in *npj Digital Medicine*) Sept. 2018 – Apr. 2019

- Developed and validated a deep learning powered diagnostic assistant to help pathologists differentiate between subtypes of liver cancer using digital pathology slides. Created python library for sampling from annotations of whole slide pathology images. Presented poster at [Frontiers of AI Assisted Care Symposium](#). Accepted to present extended abstract at ML4H conference at NIPS 2019.

Functional Analysis of Wearable Data

Feb. 2020

- Compared different methods (such as the discrete fourier transform, kmeans clustering, PCA, and NMF) for extracting functional information from continuous wearable accelerometer data. Validated methods on downstream task of predicting resting heart rate of monitored individuals. Implemented parallelized ETL pipeline for processing 20 GB of accelerometer data at second-by-second resolution. Code available at github.com/bora-uyumazturk/functional_wearable_analysis.
-

Organizations

Stanford Chaparral, Palo Alto, CA

Art Director

Sept. 2016 – Jun. 2018

- Served as art director for Stanford's oldest humour magazine.
 - Published various cartoons and written pieces and provided constructive criticism on pieces submitted by others.
-

Skills & Other

Programming Languages and Frameworks: Javascript, Python, SQL, GraphQL, Hasura, React, d3, PySpark, Tensorflow

Human Languages: Turkish, Spanish

Interests: Cartooning, Translating Poetry, Backgammon, Turkish Coffee
